ENGINEERING SCIENCE

Major in Electrical Energy

- **Objectives of the training program**

This course provides basic knowledge in the fields of electrical engineering, namely energy conversion, electronics, automation and industrial computing, combining the mathematical and physical tools of the engineer. In addition, the development of transversal competencies such as communication, organizational and management skills, is encouraged. An emphasis is put on English, complemented by scientific and technical modules also taught in English.

- **Target audience**

- 1st year: Baccalauréat S recommended (French High School diploma with advanced science), DAEU (diploma granting access to higher education)
- 'Licence': 2nd year of the field concerned, 'DUT' and 'BTS'* according to majors, continuing training (resumption of studies or VAE - validation of prior experience). Selection on file.
 (*Advanced vocational diploma / vocational training certificate)

- **Job opportunities**

- Engineering and/or design assistant
- Quality engineer
- Installation and commissioning manager
- Project Manager
- R&D Assistant Engineer
- Head of a test and/or qualification laboratory

- **Master of Engineering H3E Hydrogen Energy & Energy Efficiency (CMI)**

This curriculum trains engineers in innovative energy production and management techniques, in particular thermal and electrical, with a focus on the energy vector of the future : hydrogen. Students work in collaboration with FEMTO- ST laboratory. Selection based on application.
